## Access Control Technology & Time Attendance Solution

Access control systems are electronic security solutions that are installed to manage the flow of people into, around and out of buildings. The Main primary functions of access control systems are to monitor the locations of individuals within a building, control where individuals are able to gain access and manage individual user permissions to ensure that access is granted to the correct individual to the correct areas at the correct times. Almasaken Project Co. offers a full range of access control products from a single door systems, up to 200 doors with highly cost effective packages. A complete solution design tailored to customer needs.

**Biometric Time Clock & Attendance Tracking System** that replaces the typical time clock used to track employees attendance. Instead of employees punching in a time-card or logging their attendance by hand, they simply place their finger on the Fingerprint Reader sensor, place their hand into the Hand Reader or flash a card in front of the proximity or HID card reader and the software does the rest.

**ID's, Proximity Card Access Control Solution** is designed to control, monitor and restrict access to identified areas of a client's business, allowing those you want to enter specified areas and restricting those you don't. Access systems can be as simple Standalone System to a networkable system with complete management software it can also integrate CCTV Video Surveillance and alarm systems.

**Automatic Fast Gates Automatic Fast Gates** is the omnipresent method to control and monitor Access area under people movement in your Building reception, Gate area. It Control the flow of staff and visitors easily. The Automatic Fast Gates can be integrated with your existing access control system and Reduce manned guarding requirement to monitor all visitors and staff.
